

Setting System Location for Network Users

Written by Peter Saracino

Thursday, 23 July 2009 16:39 - Last revised Thursday, 23 July 2009

My network users can access the data but are not able to view Documents, Reports and so on.

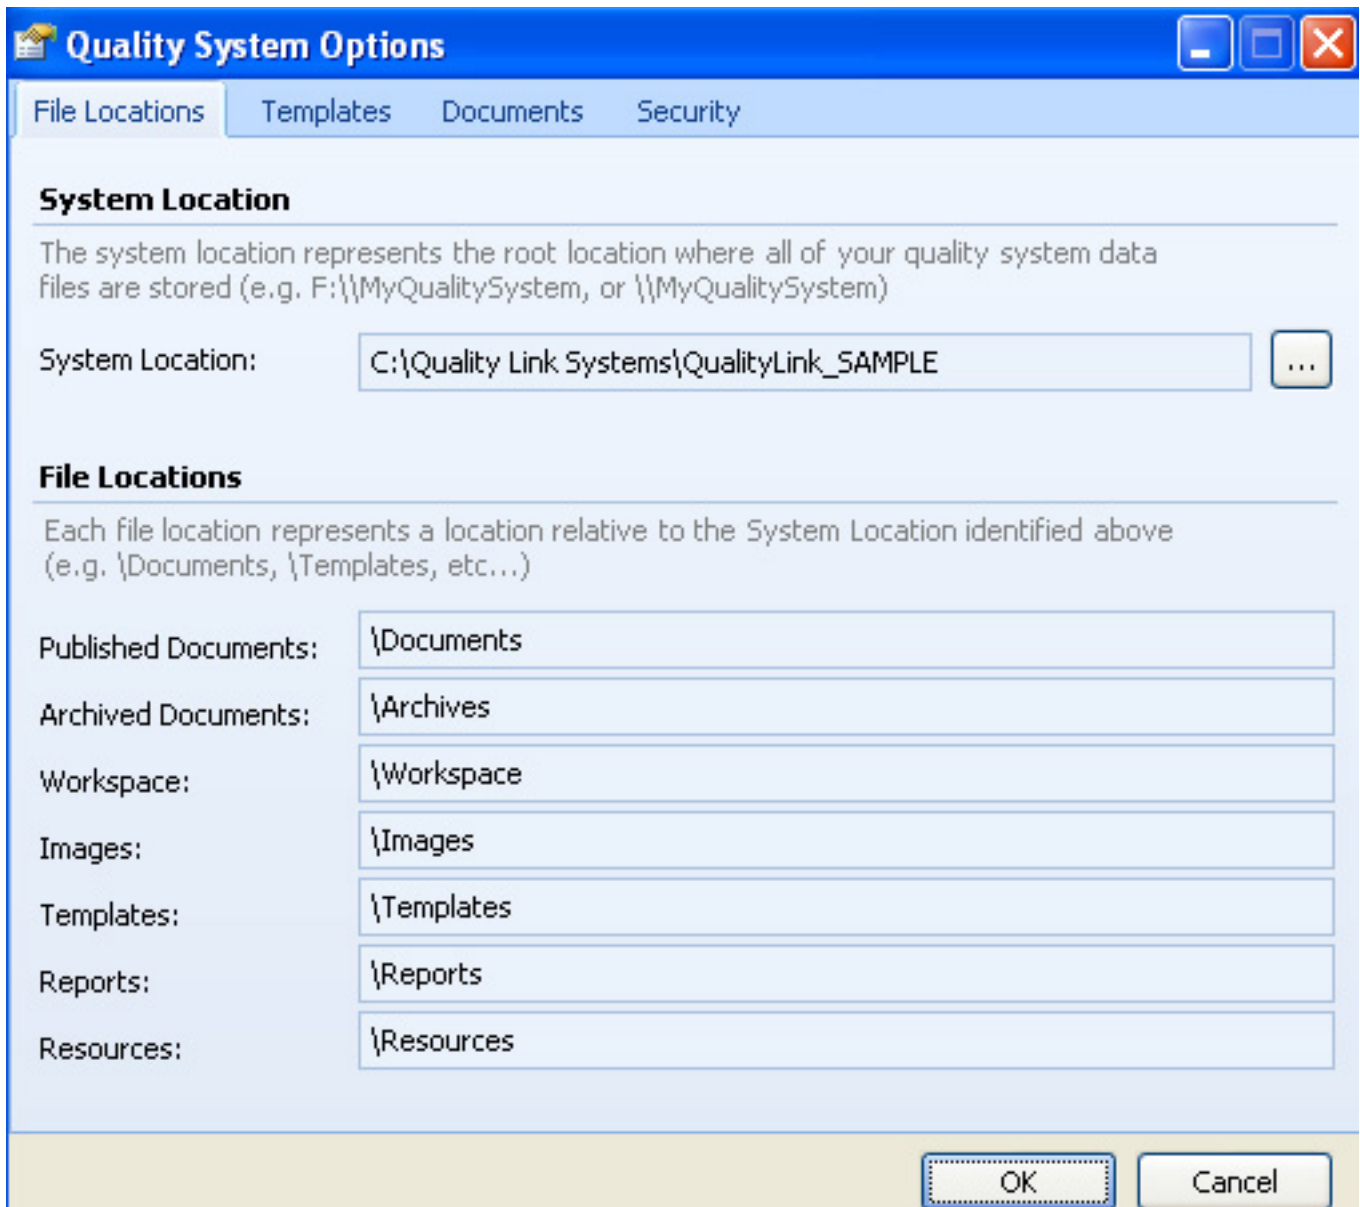

By default Quality Link maps out the System Location to where the installation was performed. This means that if you installed on the C drive of your server your network users will be pointing to their C drive where the files are not located. You will need to change this to a common path.

From the Administration Module click on System Options

Setting System Location for Network Users

The screenshot shows a Windows-style dialog box titled "Quality System Options" with a blue header bar. Below the header are four tabs: "File Locations" (selected), "Templates", "Documents", and "Security". The "System Location" section contains a text box with the path "C:\Quality Link Systems\QualityLink_SAMPLE" and a browse button "...". The "File Locations" section lists several categories with corresponding text boxes: "Published Documents" (\Documents), "Archived Documents" (\Archives), "Workspace" (\Workspace), "Images" (\Images), "Templates" (\Templates), "Reports" (\Reports), and "Resources" (\Resources). At the bottom right are "OK" and "Cancel" buttons.

More information is available at <http://www.qualitylink.com> or by contacting your QualityLink representative. For more information, please contact your QualityLink representative.
